

Changing Networks for Staff and Students

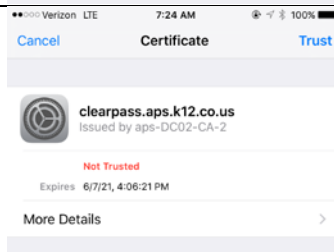

1. Open **Settings** Panel on your phone or personal device.
2. Go the settings for **APS-LOGIN** or **APS-VISITOR** and “Forget” that network

3. Click to add **APS-District** network.
4. Enter your username and password you use for signing on to computers in the building.
5. Click on the **Join** button on top.

6. Another Panel will come up asking you to trust the network. Click the **Trust** button in the upper right corner.
7. You are set and will be attached on that device for the entire school year.

The above is done using an iPhone 6S. It is similar for laptops, and Android devices but the panels may look a little different.
